FOR	VALI		
DESCRIPTION	SUBMINIATURE TUBE HYBRID HEADPHONE AMPLIFIER		
MODEL NO	SCH-12	REV 8	RANDOM NUMBER 000000000
NOTES	<p>IN NORSE MYTHOLOGY, VALI IS THE SON OF ODIN. OR AT LEAST ONE OF THEM. ODIN GOT AROUND. WHICH MAKES SENSE. HE'S KINDA THE HMFVIC. VALI MAY NOT BE THE BIGGEST AND BADDEST AMP, BUT IT'S DEFINITELY SERIOUS. IF YOU WANT GREAT TUBE SOUND ON THE CHEAP, YOU'VE COME TO THE RIGHT PLACE.</p>		
 SCHITT		AUDIO COMPONENTS	

ON THE BACK

1 Connect your source to the Vali's RCA jacks, labeled "L" and "R" with high-quality RCA cables. Alternately, you can use crappy cables if you really want to.

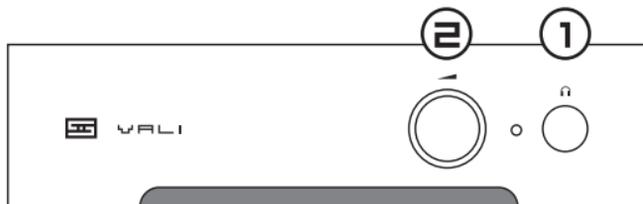

2 Connect the supplied wall-wart cable to the jack labeled "16VAC." Do not use other wall-warts, no matter how cryo-treated and molecularly aligned it may be. Most wall-warts are DC, and will not work with Vali.

3 Turn on the switch. The relay will mute Vali's output for 15-20 seconds, then it will engage with a click.

ON THE FRONT

1 Connect your headphones to the headphone jack, marked with a headphone icon. For smaller headphones, you may need a 1/8" to 1/4" adapter.

2 Control volume with the single knob on the front. It should be obvious which one it is. We recommend you stop increasing volume before your headphones explode.

3 And that's it! Enjoy your music!

NEW TO TUBE AMPS?

IMPORTANT

Do not panic! Humans lived with tube technology for several decades. They even got into space and stuff with tube technology. In fact, subminiature tubes like the ones used here were frequently used in missile programs. Now, they're used to make music. How cool is that?

TUBES ARE FUNNY

Tap on Vali when it's running and you will probably hear a ringing sound. This is because tubes are microphonic. The solution? Don't tap on it. Tubes are also usually noisier than solid state amps. For some people, these oddities are part of the charm. If you want certainty, stick to solid state—return the Vali and go for Magni instead.

LIFE AND DEATH OF TUBES

Tubes do have a lifespan. In the case of Vali, about 10,000-20,000 hours. That means...turn it off when you're not using it. It's that simple.

HOW DO I KNOW WHEN THE TUBES DIE?

There will be a small, discreet article in the local paper, written by someone who has never met the tube...no, wait. Tubes can sometimes simply stop working, in which case you'll lose a channel. Sometimes they get really noisy. Sometimes they just sound weak and distorted. Remember what we said about tubes being funny. In any case, it won't be subtle. You'll know when it's time to replace them.

WHEN THE TUBES EXPIRE...

We'll replace them within the first year under warranty. After that, you'll pay \$20, plus shipping both ways. But consider...even if you listen for 4 hours a day, every day of the year, even 10,000 hours is almost 7 years.

So there you go. Relax, listen, and have fun!
