WYRD CONNECTIONS

1 Connect Wyrd's USB output to your USB DAC with a good USB cable, 2m or less in length, and ensure that it is a true USB 2.0-rated cable.

2 Connect your USB source to Wyrd's USB input with a cable that has the same specs as above.

3 Connect the supplied 6VAC wall-wart to Wyrd with the attached cord. Do not use different AC adapters, no matter how fractally perfect, cryogenically treated, or quantum aligned they are. Most wall-warts are DC output, and will not work with Wyrd. We are using linear rectification and some of the lowest-noise regulators on the planet to ensure the lowest noise USB power.

4 Turn on the power and enjoy your music!

WYRD CONTROLS

There are no controls. No, this is not one of those veiled “there is no spoon” references. WyrD simply has no controls. Just two lights.

1 Left Light: when this is on, the USB power has been enabled. Or, in English, the switch is on. WyrD doesn't work with the switch off.

2 Right Light: when this is on, a destination USB device, such as a DAC, has been plugged into the WyrD. If this isn't on, you have a bad USB cable or something else is amiss.

Note: you can use WYRD with other USB devices (besides DACs), but don't expect better printing or better data to your USB printer or hard drive.
